VAPOURS & VOCs
BY OVER 80%**

**99% OF GERMS IN
HUMAN SNEEZE KILLED
MID-AIR AT 2M**

**SIMPLE TO INSTALL
WITH NO DUCTING
REQUIRED**

**VERY LOW
MAINTENANCE AND
RUNNING COST"**

CASE STUDIES

Eden Gardens is a Sunrise Senior Living Community specializing in Alzheimer's patients. They were struggling to maintain a fresh and healthy environment in their assisted living facilities. In particular, their Alzheimer's unit was losing an average of 3 residents per month due to dissatisfaction over air quality or illness, such as pneumonia. This represented a £60,500 loss, or more than 100% annual turnover in residents each year. Eden Gardens were delighted with the results following installation of the PureAir system into their Assisted Living facilities and recorded:

- 0 deaths due to communicable diseases
- 0 cases of pneumonia
- £60,500 increase in revenue
- £8,700 saved in avoided refurbishment costs
- £3,300 saved on chemical air fresheners
- Reduction in staff illness
- Increased waiting list

Tarara Winery required a solution that would help reduce mould and VOC's, as well as provide airflow circulation and temperature equalisation throughout the winemaking facilities on their 475 acre vineyard. Their main goal was air purification in their winemaking cave. The client was extremely pleased with the results following installation and found:

- Complete & thorough airflow circulation
- Immediate improvement in indoor air quality
- Mould reduced by 92% within 3 weeks
- All perceived VOC's eliminated in 2 weeks
- Notable improvement in product quality and reduction in spoilage due to airborne organisms and VOC's
